HYDRIA™ WATER

ROTATING DISTRIBUTOR

Rotating distributors are used to distribute the wastewater evenly over biobed material in municipal and industrial treatment plants.

HYDRIA™ WATER

ROTATING DISTRIBUTOR

Treatment takes place with regard to biological impurities, nitrogen and ammonia or in combination. Hydria Water's rotating distributors have well-developed designs that cope with large variations in water flow. The distributors are useful for all types of biobed material.

FUNCTIONS

- The water is distributed evenly over the biobed via the distributor cups on top of the distributor arms.
- A cleaning hatch on each spreader arm makes cleaning easy.
- Low operating costs, long service life and high performance.
- Does not require specially trained staff.
- Hydraulic operation via the pumped-in water. No extra energy needs to be supplied.

SPECIFICATIONS

Diameter	<42 000 mm
Drive unit	SEW/Nord
Material	EN 1.4301, EN 1.4404
